

Denmark's largest all-in-one test house

We provide complete product approval.

Denmark's largest all-in-one test house

We provide complete product approval.

Approval planning, testing, technical documentation and certification - that's what we mean by 'all-in-one test house'. You do not have to shop around and have different parts of your approval performed at different test houses.

We have it all in-house, and should there be exceptions in special cases, one of our skilled partners can do it for us.

Services

Certification

Certification is required as a mandatory part of certain approvals, or it may be desired as the ultimate proof of a product's conformity.

Extreme and custom tests

Our extreme and custom tests provide evidence of the product's resilience in an exceptionally harsh environment.

Electrical safety test

All manufacturers must consider electrical safety as an essential part of their product approval.

EMC test

The ability to co-exist with other electronic equipment is one of the most crucial elements of product approval in any country worldwide.

Product approval requirements

Get assistance in identifying approval requirements so that the product complies with legislation and can be properly labelled and marketed.

Climate test

Our test provides you with evidence of whether your product can withstand the conditions it will be exposed to during normal use.

Product approval of medical devices

Get help with product approval of your medical devices, where the requirements apply right from the beginning of product development.

Mechanical test

Our mechanical test provides you with evidence of whether your product can withstand the conditions it will be exposed to during normal use.

Technical audiology

We are among the world leaders in hearing aid testing and the only company in Denmark to certify hearing clinics.

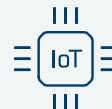

Technical advice

We provide technical advice on EMC matters, wireless systems, IoT products and systems, cybersecurity, design challenges, robustness, reliability and security.

Wireless approval and performance testing

Make sure your wireless products and systems meet all statutory requirements, standards and desired specifications.

IoT - Internet of Things

We help to find the right wireless technology, do design reviews, optimise for the desired IoT application, test accredited for cybersecurity and all other aspects of planning and approval.

Acknowledgements

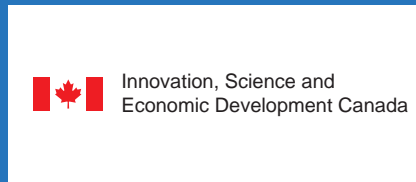

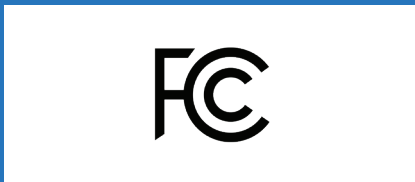

Accreditations, certifications and notifications

In the European directives, as well as in national regulations around the world, certification by a notified body may be required, depending on the product's use, properties or the approval procedure used.

Certification is also often voluntarily as it provides the highest level of credibility in the approval.

We use FORCE Certification A/S as an independent subcontractor for product certification. FORCE Certification A/S is a notified body on numerous directives and regulations and has notified body number 0200. The certification process is accredited according to ISO 17065.

Through FORCE Certification A/S, all certifications are performed according to strict impartiality principles.
