CorroZoa
New zero-ohm amperemeter

Special properties
• Unique battery-powered instrument for measuring low corrosion current
• Can be preset for measurement of up till 6 carbon steel electrodes
• Possibility of programmed measurement and data collection
• Registers connected values of potential and temperatures
• Measuring results are transferred via USB interface

Measuring channels
• Corrosion current and potential, up to 6 channels
• Temperature
• Storing function, up to 1024 measurements

Specifications
• Designed for use in harsh environment (IP 65)
• Battery lifetime approx. 60 hours
