

## Testing of ladders

Having your ladder tested is the first step to avoid ladders of poor quality!

Testing your ladder to EN 131 ensures the quality of your ladder, and enables you to promote these qualities to the end-user.

FORCE Technology hold many years of experience with testing ladders to EN 131 and INSTA 650 and will be glad to test your ladders to ensure that they fulfill the latest product standard.

FORCE Technology is appointed as testing and inspection body for the INSTA CERT (Nordic license) rules in accordance with SBC 922.
