# Advice about product approvals

Get help to comply with legislation so the product can be correctly marked and marketed.

As a manufacturer of equipment for various markets around the world, you will be faced with a large number of requirements for approvals and marketing. FORCE Technology can help with the approval, so the market access is guaranteed.

There may be significant savings, both in terms of time and money, by having the right strategy for approval. If, for example, there are multiple product types, several intended uses and functions or perhaps a product portfolio that is continuously evolving, it is a good idea to make a thorough plan. Maybe several product variants can be approved by testing just one type. Or maybe your's products cannot be transported to a testing facility and therefore must be approved in a different way. In any case, an appropriate regulatory approval procedure must be followed for each part of the world in which the product will be marketed.

FORCE Technology provides an overview of approval requirements and ensures progress in the process. Our specialists have many years of experience and knowledge about approval management and know of the authorising bodies and procedures. We prepare approval plans and conduct detailed test planning, so you get an accurate checklist for your preparation prior to the test.

” All in all, with approval management advice you get confirmation that things are being done correctly. The fact that FORCE Technology's logo is on your approval papers, and that someone from FORCE Technology has commented on the product, is a bit like getting a chartered accountant's stamp on your financial statements.

- Jacob Sørensen, Schneider Electric

We review your product and the documentation with you and disclose any necessary changes and updates. We guide your product through all the tests, and offer advice and guidance if your product fails a test. We also help you prepare the approval documentation, the 'technical dossier', and ensure that all requirements for the included documentation are met, and that all the correct information has been written on the label. In addition, we provide templates for the declaration of conformity, and other relevant items available as well as help to fill them out. Once all documentation is in place, we help you obtain certificates and markings.

With FORCE Technology by your side, you avoid making mistakes, and you will quickly and safely reach your end-goal with the necessary approvals in the various markets.

If changes happen in the form of new legislation, a new version of a standard, or an amendment to an authorisation system, we can also help you determine whether that will have any significant impact on your already-approved product.

FORCE Technology has many years of experience with approval of electronic and electrical products. We have some of the industry's most experienced and knowledgeable testing experts who will listen to your needs and ensure that you end up with the necessary approvals.

FORCE Technology can advise you on the following:

- Approval strategy
- Definition of intended use and classification
- Approval plan
- Detailed test planning
- Quality management (Quality Management Systems)
- Risk Management
- Product and documentation review for compliance with standards and legal requirements
- Preparation of technical documentation and approval basis
- Obtaining certification from the certifying bodies
